Selection and Extraction Method Examples

Selected Portion Start	Extracted Duration	Relationships between Selections
Within whole content.	Random.	Random, chronological, without overlap.
Within clip.	Less than or equal to clip length.	Random, chronology ignored, overlap ignored.
Within a group of clips.	Spanning one or more clips recorded within the same day.	From separate clips.
Heuristically obtained, eg. assume zones of interest in recorded content occur primarily near clip startpoints.	Heuristically obtained, eg. related to human attention span.	From a group of clips recorded within the same day.
Multi-pass (repetitious)	Limited so as to limit total output duration (eg. based on heuristics).	From all clips within whole content.
	Short durations followed by longer durations (eg. applied to multipass selection)	Repetitious, for instance, to lengthen output content duration with respect input content duration.

Fig. 8

8\19

Ordering Method Examples
Sequential or chronological
Random
Reverse-chronological
Flashback (later chronologies displayed or duplicated early in the order)
Montage (later chronologies displayed in brief early in the order)
Cutaway (two related or consecutive portions separated by an unrelated or distant portion)
Alternate

Fig. 9

Assembly Method Examples
Cut (butt-edit)
Short Dissolve
Long Dissolve
Fast Wipe
Slow Wipe
Graphic

9\19

Effects Mapping Examples
Addition of Sound effect
Removal of chrominance
Addition of artificial scratches and dust
Composition or overlay of sprites, animation, graphics
Addition of Music
Luminance or chrominance keying or matteing
Dissolve or mixing of other content

Fig. 11

10|19

Silent Movie Template Components Example	
Component	Purpose
Four well-separated random video selections from input content.	Selection of sufficiently differing activities or incidents from the input content to create surprise or reduce boredom.
Extract limited duration clips for each selection, each preferably less than 2 minutes in duration.	Limit clip duration to the effective viewer attention span and avoid boredom.
Filter clips to remove all chrominance information.	Replicate "black and white" characteristic of Silent Movie genre.
Remove original audio information.	Replicate silent characteristic of Silent Movie genre.
Add piano soundtrack.	Replicate characteristic of Silent Movie genre.
Insert dialogue mattes at clip boundaries.	Replicate characteristic of Silent Movie genre.
Apply scratch and dust filter.	Replicate characteristic of Silent Movie genre.
Cut in titles, dialogue mattes and clips.	Replicate hard-cut characteristic of Silent Movie genre.
Insert fade-in from black to title dialogue matte.	Include title in characteristic style of Silent Movie genre.
Insert fade-out to black from end-title dialogue matte.	Include end-title in characteristic style of Silent Movie genre.
Insert film projector sprocket hole sound over title.	Replicate projector sound-effect characteristic of Silent Movie genre.
